# BIOLOGY II (BIO1201) SYLLABUS

## Course Information

<table>
<thead>
<tr>
<th>Course title</th>
<th>Biology II (Lecture and Laboratory)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Course code</td>
<td>BIO1201</td>
</tr>
<tr>
<td>Credit Hours</td>
<td>4 credit hours 3 hours lecture and 3 hours lab per week for 15 weeks</td>
</tr>
<tr>
<td>Prerequisite</td>
<td>BIO1101</td>
</tr>
</tbody>
</table>

### Text

- **Lecture**: Biology by OpenStax (Rice University); free online or as iBook; print copy available on order: [https://openstax.org/details/biology](https://openstax.org/details/biology)
- **Lab**: “Biology II - BIO1201 Laboratory Manual” OER available as PDF at [https://openlab.citytech.cuny.edu/oer-biology/labs/](https://openlab.citytech.cuny.edu/oer-biology/labs/)

### Website

[https://openlab.citytech.cuny.edu/oer-biology/](https://openlab.citytech.cuny.edu/oer-biology/) (no sign-up needed)

### Material Needed

- Lab coat, disposable gloves and dissecting kit, notebook.

### Course Description

This is a continuation of the Biology I (BIO1101) course, focusing on the basic description of living organisms ranging from Prokaryotes to higher Eukaryotes. Topics covered also include animal organization and description of their main organ systems, with a particular attention to how such systems work in humans.

### Grading Procedure (see Grading Policies for details)

<table>
<thead>
<tr>
<th>Component</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lecture</td>
<td>60%</td>
</tr>
<tr>
<td>Lab</td>
<td>40%</td>
</tr>
</tbody>
</table>

The Lecture component will include at least 4 exams plus other assignments. The Lab component will include at least 5 quizzes and 2 practical exams.

### Course Coordinator

**Dr. Tatiana Voza**

718-260-5969  TVoza@citytech.cuny.edu

### INSTRUCTORS (to fill in by student)

#### Lecture

<table>
<thead>

</thead>
</table>
Grading Policies

Students’ performance in this course will be evaluated as follows:
- Lecture: 60% of course grade; based on at least 4 exams and attendance, respectively 90% and 10% of the lecture grade.
- Lab: 40% of course grade; based on at least 5 quizzes (40% of the lab grade), uniform midterm and final practical exams (50% of the lab grade) and attendance (10% of the lab grade)

ALL GRADES ARE COUNTED; NONE ARE DROPPED NOR ARE THEY CURVED. NO MAKE-UPS ARE GIVEN EXCEPT AT THE DISCRETION OF THE INSTRUCTOR PENDING SUBMISSION OF WRITTEN PROOF OF REASON FOR ABSENCE

➤ ATTENDANCE / PARTICIPATION GRADES

Attendance/Participation grades will be based on one of the following (as specified by your instructor):
- Several pop quizzes given at the start and/or end of class (first and last 5-10 minutes), based on reading assignments (see lecture and lab lecture schedules on pages 5-8), topics discussed in class, lab activities.
- Table below (note that leaving class early counts as “late”):

<table>
<thead>
<tr>
<th>If meeting once a week:</th>

Course Description

BIO1201 is the second half of first year Biology for non-science and science majors at New York City College of Technology. This course introduces the student to a variety of biological topics fundamental to all living organisms, with a focus on human biology. In particular, the course is a survey of organisms belonging to the Domains Archaea and Bacteria and, more extensively, the groups spanning the four kingdoms of the Domain Eukarya. A special focus will be dedicated to higher animal organization, ranging from animal tissues to organs and organ systems, and how these systems compare and contrast among other vertebrates and invertebrates.

Biology II (BIO1201) Learning Outcomes

Upon satisfactory completion of this course, the student will be able to:

I. Discuss the contribution of disciplines such as Systematics and Taxonomy to the organization of living organisms. Provide criteria for classification and naming. Explain how organisms are evolutionarily related. Understand the concept of homology.

II. Identify Prokaryotic organisms and distinguish them from Eukaryotes depending on their cellular characteristics. Provide examples of organisms belonging to the domain Bacteria and the domain Archaea. Elaborate over the contribution of bacterial infections to the development of diseases in the modern society. Explain the differences between Prokaryotes and Viruses and why viruses are not considered alive.

III. List and explain the characteristics of the kingdom Protista and of the variety of organisms belonging to it. Provide examples of various kinds of protists and how they differ from each other in cell composition, organization and general behavior. Compare the relationships of protists with other organisms, including examples of parasitic and, generally, disease-causing organisms.

IV. List and explain the characteristics of the Kingdom Fungi and of the organisms belonging to it. Distinguish between AM, zygospore, ascospore and basidiospore fungi. Provide examples of the different kinds of fungi, their habitats and their survival skills.

V. List and explain the characteristics of the kingdom Plantae and of the organisms belonging to it. Explain the concept of alternation of generations and the main differences between gametophyte and sporophyte individuals. Provide classification criteria to distinguish between different kinds of plants. Describe the differences between various plant tissues and their purpose within the plant. Analyze the main kinds of plant organs (roots, stems and leaves) and their contribution to the life cycle of plants. Describe the main steps in plants’ reproduction, and the importance of the flower as the main reproductive organ in angiosperms. Distinguish between micro- and macronutrients and their importance within the life of any plant.

VI. List and explain the characteristics of the kingdom Animalia and of the organisms belonging to it. List the various criteria for animal classification, ranging from the type of symmetry to the presence or absence of an internal body cavity. Distinguish between invertebrates and chordates.

VII. Describe the four main kinds of animal tissues along with examples of where they can be found in humans and of the purpose they may serve. Explain the purpose of having tissues organized into organs and organs into organ systems within the human body. Present the concept of homeostasis, along with examples of how it may function in humans.

VIII. Describe vital processes including hemolymph/blood circulation, immunity, gas exchange, food digestion and nutrient absorption, body fluid regulation, control of nervous impulses and reproduction and be able to compare and contrast features in invertebrates versus vertebrates (including humans).

IX. Dissect and identify the main organs in a fetal pig model. List the components of each main organ system in the provided animal model, and compare them with their counterparts in humans. Dissect and identify the main components of a sheep’s brain, and compare them with the corresponding structures in a human brain model.
City Tech General Education Common Core Learning Outcomes

Upon satisfactory completion of this course, the student will be able to:

1. Use Biology as a forum for the study of values, ethical principles, and the physical world.
2. Show curiosity and the desire to learn.
3. Engage in an in-depth, focused, and sustained program of study.
4. Employ scientific reasoning and logical thinking.
5. Derive meaning from experience, as well as gather information from observation.
6. Understand and employ both quantitative and qualitative analysis to describe and solve problems, both independently and cooperatively.
7. Understand and navigate systems.
8. Communicate in diverse settings and groups, using written (both reading and writing), oral (both speaking and listening), and visual means.
9. Value knowledge and learning.
10. Demonstrate intellectual honesty and personal responsibility.

CUNY Pathways Common Core Learning Outcomes

Upon satisfactory completion of this course, the student will be able to:

1. Identify and apply the fundamental concepts and methods of a life science.
2. Apply the scientific method to explore natural phenomena, including hypothesis development, observation and data presentation.
3. Use the tools of a scientific discipline to carry out collaborative laboratory investigations.
4. Gather, analyze, and interpret data and present it in an effective written laboratory or fieldwork report.
5. Identify and apply research ethics and unbiased assessment in gathering and reporting scientific data.

Academic Integrity Policy

"Academic dishonesty includes any act that is designed to obtain fraudulently, either for oneself or for someone else, academic credit, grades, or any other form of recognition that was not properly earned. Academic dishonesty encompasses the following:

**Cheating:** Defined as intentionally giving, receiving, using or attempting to use unauthorized materials, information, notes, study aids, including any form of unauthorized communication, in any academic exercise. It is the student’s responsibility to consult with instructors to determine whether or not a study aid or device may be used.

**Plagiarism:** Plagiarism is intentionally and knowingly presenting the ideas or works of another as one’s own original idea or works in any academic exercise without proper acknowledgement of the source. The purchase and submission of a term paper, essay, or other written assignment to fulfill the requirements of a course, and violates section 213-b of the State Education Law. This also applies to the submission of all or substantial portions of the same academic work previously submitted by the student or any other individual for credit at another institution, or in more than one course.

Accessibility Statement

- City Tech is committed to supporting the educational goals of enrolled students with disabilities in the areas of enrollment, academic advisement, tutoring, assistive technologies and testing accommodations. If you have or think you may have a disability, you may be eligible for reasonable accommodations or academic adjustments as provided under applicable federal, state and city laws.
- You may also request services for temporary conditions or medical issues under certain circumstances.

If you have questions about your eligibility or would like to seek accommodation services or academic adjustments, please contact the Center for Student Accessibility at 300 Jay Street room L-237, 718 260 5143 or [http://www.citytech.cuny.edu/accessibility/](http://www.citytech.cuny.edu/accessibility/).

| WEEK 8 | Animal Organization  
- Form and function  
- Types of tissues  
- Homeostasis: negative and positive feedback | Chap. 33 |
| WEEK 9 | Circulation  
- Overview of circulatory systems  
- The mammalian circulatory system, pressure and flow  
- Blood and blood types | Chap. 40 |
| WEEK 10 | Immunity  
- Overview of immune systems  
- The immune system: specific and non-specific defenses  
- Antibodies  
- Disruptions in the immune system | Chap. 42 |
| WEEK 11 | EXAM 3 (Kingdom Animalia and Animal Organization & Homeostasis, Circulation, Lymphatic System)  
Digestion and Nutrition  
- Overview of digestive systems and adaptations to diet  
- Human digestive system  
- Nutrition | Chap. 34 |
| WEEK 12 | Respiration  
- Overview of respiratory systems  
- Breathing  
- Transport of gases in humans | Chap. 39 |
| WEEK 13 | Body Fluid Regulation and Excretion  
- Osmoregulation  
- Waste products and excretory systems  
- The human urinary system and its regulation | Chap. 41 |
| WEEK 14 | Nervous System  
- Overview of nervous systems  
- Neurons and glial cells  
- CNS and PNS  
- Drug abuse and neurodegenerative diseases | Chap. 35 |
| WEEK 15 | Reproduction  
- Asexual and sexual reproduction  
- Fertilization  
- Male and female reproductive system  
- Regulation of human reproduction  
- Pregnancy and infertility | Chap. 43 |
